Figure 1 Initial Fundus Examination

(A) Right eye: severe optic disc edema with peripapillary hemorrhages and (B) left eye: normal optic disc. (C) Post-contrast axial T1-weighted fat-suppressed orbital MRI shows thickening and perineural enhancement of the right optic nerve at onset (arrowhead). (D) FLAIR brain MRI shows an increased enlargement of the right optic nerve after 2 months of follow-up (arrowhead) and persistent enhancement on postcontrast T1-weighted image (not shown). (E) Diffusion-weighted and (F) apparent diffusion coefficient images at onset demonstrate marked diffusion restriction along the right optic nerve (arrows).

A 63-year-old man presented with sudden vision loss in the right eye. Fundusoscopic examination revealed right severe disc edema with peripapillary hemorrhages with no abnormality on the left (Figure 1, A and B). Orbit and brain MRI's showed an extensive enhancing lesion with restricted diffusion involving the right optic nerve (Figure 1, C–F) and FLAIR hyperintense lesions in the right hippocampus (Figure 2A) and parietal lobe (Figure 2, C and D). The patient received oral corticosteroids followed by plasma exchange. Owing to lack of clinical improvement, a new brain MRI was obtained, showing an enlargement of the lesions (Figure 2, E–H). The biopsy of the

Figure 2 Axial FLAIR (A, C, E, G) and Gadolinium-Enhanced T1-Weighted (B, D, F, H) Brain MRI at Onset (A–D) and 2 Months Later (E–H)

Initial MRI shows increased FLAIR signal in the hippocampus (A, asterisk), with no apparent infiltration of the chiasm (B, arrowhead), and in the right parietal lobe (C, arrow) with contrast enhancement (D, arrow). Follow-up MRI shows thickening (E, arrowhead) and enhancement of the chiasm (F, arrowhead) and hippocampal lesion (F, asterisk) and enlargement of the parietal lesions (G, arrows) with contrast enhancement (H, arrow).

parietal lesion confirmed the diagnosis of glioblastoma multiforme (GBM). Visual deficit as initial presentation of GBM is rare (13%).¹ A neoplastic origin of an optic neuropathy should be considered in enlarged optic nerve with persistent enhancement and marked MRI diffusion restriction.²

Study Funding

The authors report no targeted funding.

Disclosure

J.M. Cabrera received speaking honoraria from Sanofi; E. Fonseca received funding from ECTRIMS Clinical Training Fellowship Programme; M. Sepulveda received speaking honoraria from Roche, Biogen, and UCB Pharma and travel reimbursement from Biogen, Sanofi, and Zambon for national and international meetings; A. Camós-Carreras has nothing to disclose; Y. Blanco received speaking honoraria from Biogen, Merck, Novartis, and Genzyme. Go to [Neurology.org/N](https://www.neurology.org/N) for full disclosures.

Publication History

Received by *Neurology* April 27, 2022. Accepted in final form September 13, 2022. Submitted and externally peer reviewed. The handling editor was Roy Strowd III, MD, Med, MS.

Appendix Authors

Name	Location	Contribution
Jose Maria Cabrera-Maqueda, MD	Center of Neuroimmunology, Service of Neurology, Laboratory of Advanced Imaging in Neuroimmunological Diseases, Hospital Clínic of Barcelona, Institut d'Investigacions Biomèdiques August Pi i Sunyer (IDIBAPS), and Universitat de Barcelona, Spain	Drafting/revision of the manuscript for content, including medical writing for content; major role in the acquisition of data; study concept or design; analysis or interpretation of data

Appendix (continued)

Name	Location	Contribution
Eliana Fonseca, MD	Department of Neurology, School of Medicine, Pontificia Universidad Católica de Chile	Drafting/revision of the manuscript for content, including medical writing for content; major role in the acquisition of data; study concept or design; analysis or interpretation of data
Maria Sepulveda, MD, PhD	Center of Neuroimmunology, Service of Neurology, Laboratory of Advanced Imaging in Neuroimmunological Diseases, Hospital Clínic of Barcelona, Institut d'Investigacions Biomèdiques August Pi i Sunyer (IDIBAPS), and Universitat de Barcelona, Spain	Drafting/revision of the manuscript for content, including medical writing for content; major role in the acquisition of data; study concept or design; analysis or interpretation of data
